Contents of this lesson

Topics:

- **What is Alarm Management System (AMS)?**
- **When to use AMS?**
- **Unique features in AMS**

AMS description

- Universal alarm collection point/server for diverse SCADA systems
- Alarm monitoring 24 hours a day with offsite alarm acknowledgement
- Duty plans for offsite personnel can be set up to cover extremely long periods of time and are easily modified or changed

When to use AMS

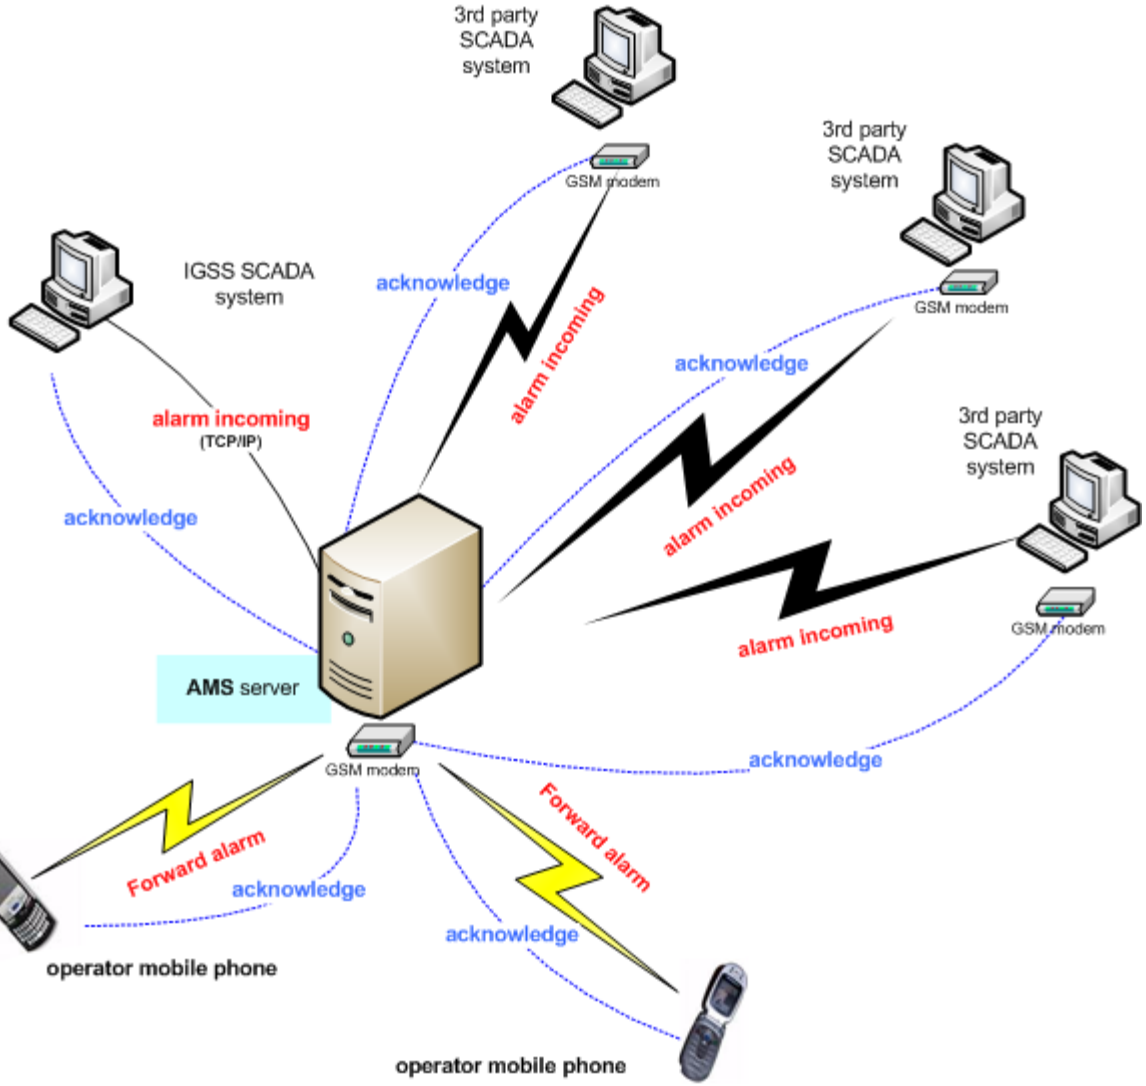

- Used when command center alarm solution required
- Alarms from the different plants belonging to the same technical/ business unit – and from different SCADA systems – are collected at a single point
- For better allocation of watch duty personnel resources

What AMS does

- Alarm collection from 3 sources:
  - An IGSS system
  - A Short MessageService (SMS) source
  - An OPC source
- Alarms collected in AMS can either be:
  - acknowledged at the AMS collection point/server or...
  - forwarded to operator personnel cell phones for acknowledgement

AMS features

- Create unlimited number of duty watch calendars
- Create unlimited number of duty watch persons
- Create duty watch calendars with unlimited recurrence through time
- Create alarm filters specific for individual duty watch personnel or specific servers
- Alarm forwarding and acknowledgement via texting (SMS protocol) from cell phones
- Source specific monitoring of alarm traffic
